

Requirements for solar panel installation

1. Plans with location of panels or site visit
2. Access around site or scaffolding to install panels to roofs
3. Roof to be felted and lathed, ready of in-roof solar panels or roof to be tiled ready for on roof solar panels
4. Single electric spar or non-switch socket to connect pump station control in hop press.

Method of installation.

1st fix - Panel will be installed to roof, a flow and return line will be set up from the panel to the hop-press location.

2nd fix - After the house has been plastered and made secure, we will then install the cylinder to the hop-press location, the pump station will also be installed at this time.

3rd fix – When your plumber has finished installing the cold water feed and secondary heating (Gas, Oil, Wood pellet etc.), we will set up the panel and commission the system.
